

Dear Kimani,

It was a pleasure speaking with you today, and I'm looking forward to continuing our progress! You mentioned blood sugar, sleep and hormonal health so let's definitely address that as part of our ongoing goal to improve your health.

Your diagnostic report, Lifescore and dashboard are available to you in your portal to review in detail. Let's build upon your plan to maintain these improvements, while continuing to achieve further health optimization! Your Lifescore is a valuable metric to track your progress on Quality of Life, Longevity and Cellular Aging and based on our conversation today, I've recapped this quarter's priorities below:

Metabolic Health

As we discussed, our first priority is metabolic health (insulin resistance/blood sugar). We know that this directly impacts longevity and accelerated aging. It's also closely tied with your nutrition and exercise. To recap, this is what I recommend:

Lifestyle:

- Continue Intermittent Fasting- aim for a 16 hour fasting window and an hour eating window
- Keep your carbs low during your eating window. Focus on protein, healthy fats and vegetables. When adding carbs, keep them to 25% of your plate or less. Aim for complex carbs (carbs with fiber/protein) in them! Examples are beans, legumes, whole grains and starchy vegetables. Aim to limit processed carbohydrates, such as bread, pasta, white rice, cereal and sugar sweetened beverages.
- Add in a mixture of strength and aerobic exercise 3-5x/week (150 min/week)- great job!
- Set up a consistent sleep schedule! This is actually critical for blood sugar regulation!
- Consider getting a Continuous Glucose Monitor, as your PCP for the FreeStyle Libre 3 sensor or use one of the following websites
 - [Here is a great program that can support you called Nutriscence](#)
 - [Here is another called Levels Health](#)

- [Lastly, here is one call Zoe](#)

Supplements: Peak NMN 3 capsules daily

Hormonal health

Our second priority is to address hormonal health. Optimizing this is important because it supports energy, sexual health, body composition and longevity.

Lifestyle:

- Aim for 7.5-8 hours of sleep/night. Aim to get to sleep by 10pm each night (The hours of 10pm-midnight are "super sleep" for your brain!)
 - Add 2 capsules of Lifeforce Magnesium 1 hour before bed to deepen your sleep.
- Strength train 3-4x/week- awesome job
- Work to get your blood sugar down (this helps improve hormonal optimization and reduce the conversion of testosterone to estrogen)
- Reduce alcohol by 50%

Supplements: DHEA, LF Magnesium

[Here is a testosterone boosting supplement to try \(click here\)](#)

The main pillars of healthy living include nutrition, fitness, sleep and stress management so let's continue to always prioritize these. If you would like additional resources please let us or your health coach know!

Kimani, it was a pleasure speaking with you and I hope this has been helpful. All of these recommendations are available in your dashboard. Please don't hesitate to reach out to us for any questions.

Sincerely,

Mary Stratos, PA-C, IFMCP
